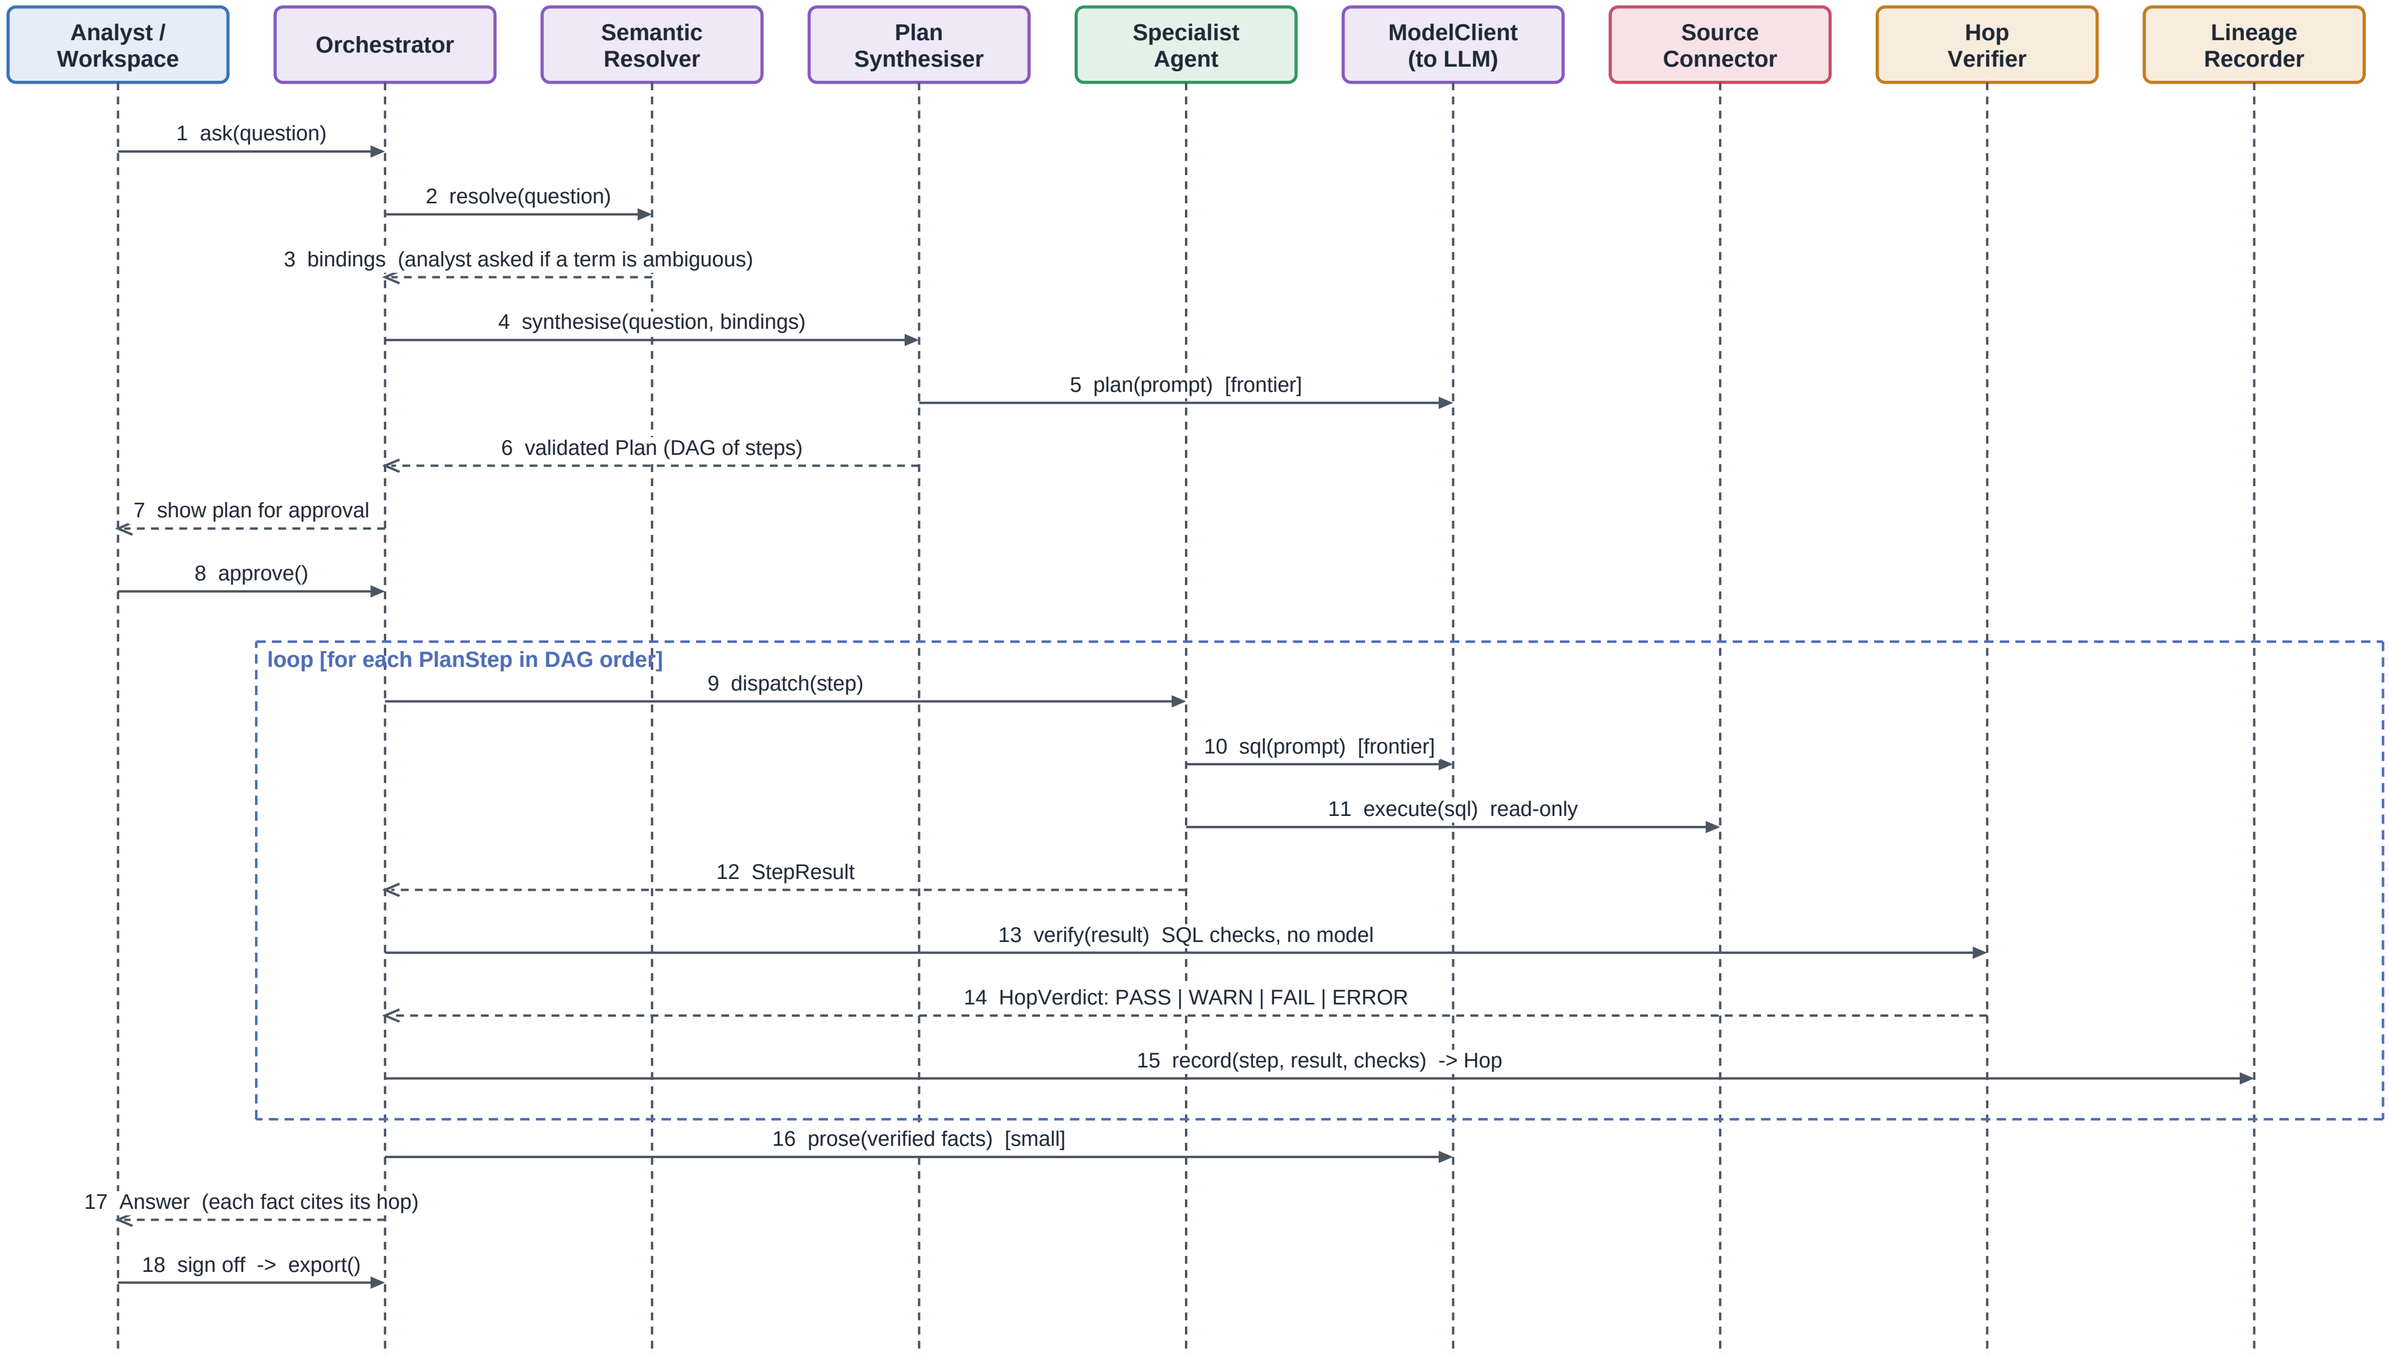
UML sequence diagram - answering one question (main path)



Steps 9-15 repeat for every PlanStep. Every StepResult returns to the Orchestrator; verification (13) never calls a model. Plan (5) and SQL (10) use the frontier model, prose (16) the small one.

Not drawn, described in the text: clarifying an ambiguous term, SQL repair on error, cross-source reconciliation, and halting on a RED hop.

Solid arrow = call; dashed arrow = return or reply.
